

## REASONS WHY IT IS NECESSARY TO REPLACE YOUR WATER OR AIR CARTRIDGE?

In our warranty it stipulates that if you do **not** replace your cartridge with us on the due date, the warranty becomes void. A 50 year warranty is rare and worth keeping.

The percentage of contaminant removal drops after a year. Do you not want a cartridge that removes over 95% of lead, fluoride, chemical and microbes? Or only 20 to 50%?

In the case of an air purifier, a clogged cartridge could cause the motor to burn out.

The media impregnated in the ceramic that fights bacteria has a shelf life the moment it was made wet. (not in the case of air purifier cartridges)

A clogged cartridge can add pressure to the system and cause damage.

Peace of mind knowing that you are getting the best possible water for drinking, coffee and tea, making juice, baby formula, cooking, washing vegetables, humidifiers and sleep apnea machines, making juice etc. And the purest possible air.

If you do not wish to replace your multi-stage washable ceramic, then for liability reasons we need you to stop using the filter. Once a cartridge is saturated with contaminants and chemicals, it can release these in a much higher percentage than in the tap water. We cannot take responsibility for any illness caused by this.

A Universal Full Spectrum ceramic works out to a cost of about 95.00 a year. This is less than 25% of the average cost of bottled water for that same period. Your health is the most important thing you own, so it is not a large investment to have the best possible water by replacing your cartridge.

Another benefit is that when you replace your cartridge on time with a genuine certified cartridge from us, you maintain the 50 year warranty on your system.

The BelKraft 2000 and the Slimline has a cartridge that lasts 12 months.

The Universal systems has an 18 month cartridge.

The 2015 and 2020 systems have a two year cartridge.

Whole House BB cartridges last 12 months.

The air purifier cartridges for the 6 and 10 stage units lasts one year. On other models the pre and post filters last 6 to 12 months and the HEPPA drum 3 to 5 years.

In the case of the system being used in an office or business, that cartridge should be replaced sooner, as the max it can do is about 4800 liters. (1300 gallons)

There are all averages and can vary with water or air conditions and the number of people in the home or office.

If you have our water or air purifier, and want to save money on cartridge replacements click [HERE](#) to register for 'Autoship', where we will ship your cartridge replacement on time plus save another 10% off the sale price.
